BP3: Counter argument is disposable paper kitchen towels are convenient

Conclusion: Restating thesis in different words

Q3. Thesis: In the ongoing debate between disposable paper kitchen towels and reusable cloth towels, it is clear that reusable cloth towels are the better option for the environment and for our health.

Q4.

In the ongoing debate between disposable paper kitchen towels and reusable cloth towels, it is clear that reusable cloth towels are the better option for the environment and our health. At the end of the day without a world to live on there is no life.

Reusable cloth towels are more eco-friendly than disposable paper towels. They can be washed and reused, reducing waste and saving money in the long run. Additionally, cloth towels can be made from sustainable materials, such as bamboo or organic cotton.

Reusable cloth towels are safer for our health than disposable paper towels. Disposable paper towels often contain harmful chemicals like bleach, which can be harmful if ingested. Reusable cloth towels, on the other hand, do not contain these chemicals and are a safer option.

While disposable paper towels are convenient, they have a negative impact on the environment. Paper towels are made from trees, which require a significant amount of energy and water to produce. Moreover, paper towels cannot be recycled or composted after use, adding to the landfill problem.

In conclusion, while disposable paper kitchen towels may be more convenient, they come at a high cost to the environment and potentially our health. Reusable cloth towels are a sustainable and safer option and should be recommended as the preferred choice for households. By making conscious decisions and choosing reusable cloth towels, we can significantly reduce waste and contribute to a healthier environment.
