READING TEST

6/10

This article discusses the possibilities and pitfalls of Hollywood's trend of remaking popular movies and TV shows. While remakes have been part of the film industry for a long time, the recent success of Disney's remakes has inspired many studios to consider remaking their own properties. However, remakes need to have a genuine reason to exist, and they need to differentiate themselves enough from the originals. The article questions whether a live-action remake of How to Train Your Dragon will be successful, but it also notes the potential for digital designers to create spectacular dragon effects.

VOCAB TEST

Hypo-

Hypothesis - a proposed theory in a scientific method ✓

Hypothetical - an alleged assumption based upon further information ✓

Hypocritical - one behaving in a way that contradicts their own beliefs ✓

Hypotension - abnormally low blood pressure ✓

Hypodermic - needles or syringes used for the skin ✓

WRITING TEST

AOS is one of the most prestigious and advanced schools in Virginia. Many students wish to go there, and try to pass tests and do extensive learning and try to prove how exceptional they are. I would like to do the same and explain why I think I would like to go to AOS.

I rather want to talk about the academics as well as the socio-emotional learning I get from this. High school is a huge step in everyone's life and coupled with the gradual difficulty of homework and exams, many people struggle with making friends or being "popular". I want to learn more about the environment of other places and see how well I adjust. Not to say I don't care about the academics, of course. I want to learn more about high school in general and teach myself new work ethics and friendships,

MATH TEST

Julienne practiced her dance routine for twice as many minutes on Monday as she did on Tuesday. She practiced her routine those two days for a total of 2 hours and 15 minutes. For how many minutes did Julienne practice her dance routine on Monday?

Julienne's time on Monday was twice as long as Tuesday.

Monday = $2t$

Tuesday = t

Adding those together, you get 2 hours and 15 minutes

$2t + t = 2$ hours and 15 minutes

$2t + t = 3t = 2$ hours and 15 minutes

2 hours and 15 minutes = 135

$3t = 135$

$t = 45$

$\frac{1}{1}$

Julienne practiced for 45 minutes on Tuesday

Since her time on Monday is twice as long as Tuesday, Julienne practiced for

90 minutes
