

Agam

Have you thought about saving the planet? Did you know that it's super easy? Well, let me introduce you to the reusable towel. The reusable towel is made up of cotton, this easily can aid you when trying to absorb all liquids like water, and coke just to name a few.

People might just say why don't you use a paper towel. Well if we only use paper towels we would have to start cutting down a ton of trees which can harm the environment by species losing their homes and less carbon dioxide would be taken in by the trees.

Well, you could just say plant more trees and we don't have to worry about it. Well since we're going to throw out the paper towels, guess where it would go? The dump is made up of trash like rotten food, glass, paper, and plastic. Since the paper is going to stay in the dump almost forever. Wait what do you forever you might be asking. Well, the special paper doesn't break down, unlike rubber and cotton. It's not biodegradable!

To sum up this whole essay it is just better to use reusable towels because it protects the planet, and we wouldn't have to worry about other animals losing their homes.
