Math - 450

@@@**@**

Some reasons I consider why I could be a suitable candidate for a STEM-based school is STEM teacher methods in multiple subjects such as science and mathematics. STEM is a path that anyone control of the stem and collaboration makes me increase my creativity and builds my communication and collaboration skills, and that is something every condidate for a STEM-based school should have. In the 21st-century STEM education traits are Problem solving, leadership, and most important of knowing when you have failed, but It what is different about me is that I am very hardworking and determined for learning about new things that will benief me and shape into a better person tomorrow. I willing to pratice my weak areas and will always try again if I have failed.
