Section + Module	Incorrect Question #	Why is my answer in	ncorrect		Why is this th	e correct answe	er								
English 1	5	"a discernible explanation" would mean that the scientists are unable to percive an explantation for the presence of planets rather than find an actual explantion			B, "a straightforward explantion" makes the most sense compared to all the other answers			English 2	16				C is correct becuase it is the only ansewer choice that shows the benefits of using humans over AI		
English 1	20	C is incorrect because the clauses are not independent			A since the part following the comma is a continuation of the sentence before the quote. There is no indpendent clause following the quote.			English 2	26	A is an indirect statement rather than direct stating the two problems			D is the only active and the most consise and clear option.		
English 1	28	C is incorrect because it is passive voice.			A since the rest of the options are passive voice.			Math 1	23				D takes into account the square miles and yards.		
English 2	5	C indicates that the expectations were exemplified and not forced on my Elizabethan society.						Math 2	17	A is wrong becuase the question clearly states "increases by .49%". I did not read the question properly			C is correct becuase the questions says increases and the rate is compounded off the previous year		
English 2	6	C is wrong becuase the question never actually says that the approach is new or interesting			B, innocuous means less harmful which matches the definition presented by the phrase following, "less benign".			Math 2	21	29 is wrong becuase it is the solution of x, not x-1. Again, I did not read the question			28 is correct becuase it is the solution of x-1 after simplifying		
English 2	10	A is wrong becuase the text never says the speaker is dreaming.			D is right becuase the line "To work my mind, when body's work's expired" shows that the speaker is tired but continues on to think about his freind instead of sleeping.			Math 2	26	B is wrong because perpendicular lines are ratios of the negative reciprocal; I sey up the problem like a/b which is incorrect-I had to take into account the fact that they were the negative reciprocal of the first line.			C is right because perpendicular lines are ratios of the negative reciprocal, so multiplying b by 2 multiplies the corresponding numerator by 2 as well.		
English 2	11	A is wrong becuase th people want.	wrong becuase the text never says he knows what the ple want.		D is correct becuase it is the only one which actually includes information form the text.
